

PERFECT DIFFUSION

HUNTER DOUGLAS SILHOUETTE® WINDOW SHADINGS IS THE IDEAL SOLUTION FOR FILTERING LIGHT WITH EXCEPTIONAL ELEGANCE.

Hunter Douglas is a household name not only in the industry of architecture products, but also interior furnishings. Since developing the first lightweight aluminium blind in 1946, it has continued to be a leader in developing innovative window coverings of the highest quality.

One such solution is the Silhouette® Window Shadings, which diffuses strong sunlight into a warm glow. This is achieved with its signature S-Vane™ – soft fabric vanes that are suspended between two sheers. The patented weave of Silhouette® Window Shadings also eliminates the dizzying moire effect created when light is reflected off two different materials. This helps to deliver a clean and undisturbed view of the exterior while maintaining adequate privacy inside.

With vanes that can be tilted to any desired angle, Silhouette® Window Shadings give users complete control when it comes to privacy and daylight. Not only that, it provides up to 88 per cent ultraviolet protection with the vanes opened, and 99 per cent when the vanes are closed. In addition, the award-winning LiteRise™ cordless lifting system makes operating window shadings easier and safer than ever.
